WASATCH WIND INC. RECEIVES \$600,000 GRANT AWARD FROM THE STATE OF PENNSYLVANIA

Pennsylvania Department of Environmental Protection PEDA Grant Award To Support Initial-Company Tower Implementation

HEBER CITY, UT – October 15, 2007 – Wasatch Wind (WW) announced today the receipt of a \$600,000 grant award from the Pennsylvania Energy Development Authority (PEDA). The grant award supports the installation and testing of the company's innovative Space Frame Tower (SFT) together with a utility-scale wind turbine, utilizing the company's Hi-Jack™ lifting system.

“With concerns over rising energy prices, and the environmental impacts of traditional fossil-fuel powered generation, investing in clean and renewable alternatives is important to Pennsylvania's future,” said Department of Environmental Protection Secretary Kathleen A. McGinty.

“Innovative wind projects like the one proposed by Wind Tower Systems offer the potential for exciting opportunities in the commonwealth as we work towards building a new energy economy.”

Wind Tower Systems Space Frame Tower and Hi-Jack™ systems enable less expensive, less intrusive, and smaller footprint wind developments on sensitive sites. The company's products transport on standard flatbed trucks and eliminate the requirement for large 40-foot wide roads to support crawler crane movement between turbines, both of which will reduce the environmental impact of wind developments in Pennsylvania.

“The leadership steps being taken by Pennsylvania to support cost and environmental advances in wind energy are critical to the introduction of our products and technologies, said Tracy Livingston, CEO of Wasatch Wind. “The financial, siting, and manufacturing support provided by Pennsylvania reduces risk and encourages participation by all parties in the field testing of new technologies.”

Under the PEDA grant, Wind Tower Systems expects to complete the installation of a first commercial tower in Pennsylvania with a major wind turbine manufacturer in 2008. In addition, WTS is working to expand on their existing ties to Pennsylvania firms (Lord Corp. of Erie and DFJ Element of Radnor) by partnering with additional manufacturing companies. Pennsylvania's clear renewable energy commitment and locus of wind energy companies make the state an excellent strategic fit.

About Wasatch Wind Inc.

Wasatch Wind's Wind Tower Systems Division provides innovative towers and Hi-Jack™ System lifting solutions for the utility-scale wind turbine marketplace. The Company's Space Frame Towers dramatically reduce installed tower costs, transport on standard flatbed trucks to enable difficult-to-access sites, and reduce tower manufacturing capital requirements by 75%. WTS's breakthrough Hi-Jack™ System reduces erection costs and enables remote and small wind farm sites. The company also develops wind projects throughout North America, with an emphasis on geographic sites that are advantaged by the lower cost, easy transport, and height scalability features of the company's tower system products.
